

We need to overbook same-month resort reservations during July & August

Cancellations cost us around \$1 million in revenue last summer

But we can turn that into additional revenue going forward

Our resort's **cancellation rates** & **average daily prices** spike during summer

Which increases **revenue** but also **revenue loss by cancellations** in July & August

Summer bookings **made within 30 days** of arrival only make up 17% of cancellations

What does this mean?

By **overbooking same-month reservations during the summer**, we can:

- Replace reservations booked more than 30 days in advance that are likely to be cancelled.
- Fill those rooms with bookings that have a lower risk of cancellation.
- Increase occupancy and recover revenue lost from cancellations.
- Improve overall profitability during peak summer months.
